

Press Release – August 2011

Hat Furring Channel designed for Sound Clip Application

Trouble with channel connecting to sound clips?

Custom Stud Hat Furring Channel has been custom designed to fit the RSIC Noise Control Clips from Pac-International Inc. – **FIRST TIME, EVERY TIME.** We worked closely with Roll Craft to insure that our tooling design would create channel that was consistent and worked every time in the sound clip application.

“We have a college music building project that has thousands of clips and hundreds of feet of channel. Channel fits and stays every time. This has saved time and material for our contractor, thank you Custom Stud.” said Les Zenter, Sales with Wallboard Inc., Minneapolis MN.

Our Channel is made from true gauge 018 and 030 material in 7/8” and 1 ½” sizes. For tougher jobs, 033 and 043 product is available. Custom Stud steel meets or exceeds all ASTM specifications and is SSMA certified. Contractor preferred – ALWAYS consistent material.

Custom Stud, Inc. Located in Lakeville MN, shipping throughout the US since 2001. Custom Stud has a continued standard of integrity, value and commitment to high quality products.
