## Custom Stud EXPANDS to meet Customer Demand

Custom Stud Inc. adds another production line to meet the needs of our growing customer base.

Demand has motivated expansion on the production floor at Custom Stud Inc. A new Light Gauge Deep Leg track line is operational. This expansion will allow us to roll form true to gauge and true to ASTM specifications, a deep leg product in light gauge thicknesses from a minimum of .018 to .033 mil.

"My customers kept asking for deep leg track without the wavy leg. The lighter the steel, the more the wave. I'm truly pleased with the results of our new Track line. The quality of our new track is consistent with the quality of our studs." Duane Finch, Sales Manager, Custom Stud.

Custom Stud Inc. is a privately owned corporation founded in 2001. We are located in Lakeville, Minnesota, just 30 miles south of Minneapolis. All products are available in standard and custom lengths, metal thickness ranges from 12 to 25 gauge, with widths up to 12" for studs, track and joists.

We keep it SIMPLE with **ASTM** Specification compliance and **SSMA** Code Compliant Certified products. Why complicate things, USE Custom Stud products that are proven winners.
